Participant Quick Start — Match Evidence and Results

v1.1 (production documentation release in package v3.22) | Participants and team representatives

PRODUCTION DOCUMENTATION RELEASE (v3.22) — USER-DIRECTED GATE WAIVER; TECHNICAL TESTS REMAIN UNVERIFIED

A concise participant-only workflow for confirming the correct event rules, submitting readable original battle evidence, checking scores and raising disputes. It avoids administrator commands and implementation details.

Prepared 29 October 2026 • Policy version v3.15

1. Before the event

⚓ **Quick hint:** Check the stated authority, required evidence, and completion criteria before acting; do not infer an approval that is not recorded.

1. Open the exact Pilot or Recurring ruleset named in the latest official notice. Check event time zone, arrival cutoff, map/mode, lineup rules, evidence route, settings version, and help contact.
2. Confirm that your in-game name matches the published roster or identity mapping. Ask the organizer to correct a mismatch before play.
3. Join the official communications route and keep the notice/support method available. Each team should have a primary and backup representative.

2. Before ready-up

⚓ **Quick hint:** Verify room configuration and both sides' readiness before starting; record exceptions as they occur.

4. Check the fixture ID, opponent, game number, map, mode, duration, team/ship limits and lineup visibility.
5. Wait until both team representatives confirm the room settings and legal lineup. Raise a mismatch before ready-up; do not assume the host's check is enough.
6. Know the separate clocks for attendance, between-game wait, restart request and restart completion. Use only the event's published limits.

3. Capture and submit evidence

⚓ **Quick hint:** Preserve the original evidence and distinguish an observed fact from an OCR, bot, or calculator interpretation.

7. After the battle, capture the original readable Personal Score/result screen required by the event. Include the visible player identity and the fields the event requires.
8. Do not crop out relevant values, paint over text, or edit the numeric result to make it agree with the calculator. If the image is unclear, retain it and request a clear original.
9. Submit through the event's officially designated Discord channel/form or approved route. If the bot is unavailable, follow the published manual fallback. Do not send screenshots to an unverified private account.
10. If OCR text or a bot reply appears, compare it against the original screenshot. OCR is not the official score until accepted by the event's recordkeeper.

4. What you should verify

⚓ **Quick hint:** Check the stated authority, required evidence, and completion criteria before acting; do not infer an approval that is not recorded.

Field	What to check
Player / clan or alias	Matches your identity mapping and the correct game.
Battle Result	Victory/Defeat or draw as shown on the original result.
Map / mode	Matches the visible battle record and fixture.
Battle start time	Date/time is associated with the correct game.
Damage	Use the official post-battle Damage statistic specified by the rules; not potential damage.
Other OCR fields	Credits, Free XP or additional metadata only where the designated tool/event collects them; verify all against the source image.

5. If something is wrong

⚓ **Quick hint:** Check the stated authority, required evidence, and completion criteria before acting; do not infer an approval that is not recorded.

11. Do not silently overwrite a disputed value or ask anyone to alter the screenshot. Preserve the original evidence and the bot/calculator response.
12. Send the match/game ID, disputed field, original screenshot, extracted value, and a short explanation to the official correction route.
13. If accepted metrics, a scoring output, the calculated match outcome, or the official record conflict, pause outcome publication and bracket advancement until the inputs/formula are reconciled and the referee or authorized decision-maker rules. Pause any affected individual score or award publication too.
14. Follow the published appeal deadline and include the opponent's response where requested. A correction must retain the old value, new value, reviewer, reason and timestamp.

6. Definition of done

⚓ **Quick hint:** Use the defined term consistently; if two documents differ, follow the explicitly named governing source.

Submission complete when — The original readable screenshot is linked to the correct participant and game, required values have been checked, the official recordkeeper has confirmed acceptance or requested a specific correction, and any dispute is recorded. A bot response alone is not proof that the record is accepted.

Important policy notes

⚓ **Quick hint:** Check the stated authority, required evidence, and completion criteria before acting; do not infer an approval that is not recorded.

- Recurring bracket advancement uses the verified match outcome calculated from the published individual-performance metrics and approved scoring method, with D21 tie-breaks applied where needed; an individual dblns value is not used alone unless the approved formula expressly says so.
- Pilot Damage ranking determines only the individual awards expressly announced for that Pilot.
- The default participant-facing release suppresses H12; the historical $12.56 diagnostic is not cash value, official store price, prize valuation, or an award obligation.
