Training Room Host and Referee Guide

v1.1 (production documentation release in package v3.22) | Room hosts, team representatives and referees

PRODUCTION DOCUMENTATION RELEASE (v3.22) — USER-DIRECTED GATE WAIVER; TECHNICAL TESTS REMAIN UNVERIFIED

A practical room preflight, ready-up, restart and closeout sequence. The current World of Warships Wiki describes Training mode as selectable from the battle-type icon and says it supports custom maps, duration and team configuration, with up to 12 ships per team. The exact installed-client clicks remain unverified here.

Prepared 29 October 2026 • Policy version v3.15

1. Status and current reference

⚓ **Quick hint:** Historical material provides context only; do not present it as current validation or approval.

Client test still required — The guide provides a safe, client-agnostic procedure with a reference navigation path, but no live Windows game client or current UI screenshot was available for a click-by-click test. Do not call the exact interface instructions verified until the named host completes the client walkthrough and records the client build/date.

Current reference consulted 29 October 2026: World of Warships Wiki, “Game Modes,” Training section, which lists Training at Access Level 17, custom map/duration/team configuration and up to 12 ships per team. The wiki is a supporting reference; verify the installed client before using exact UI labels.

2. Before opening the room

⚓ **Quick hint:** Check the stated authority, required evidence, and completion criteria before acting; do not infer an approval that is not recorded.

1. Read the approved event settings and match fixture. Record the match/game ID, host, fallback host, map, mode, duration, ship/tier restrictions, sides/spawns, lineup visibility, observers and setting version.
2. Confirm that the selected event format permits the planned lineup and room settings. Pilot lineup visibility may differ from the recurring format; do not apply one format’s exception to the other.
3. Check that a fallback host can create or modify the room if the assigned host fails. Verify each team representative and the referee contact are present.

3. Create and configure

⚓ **Quick hint:** Check the stated authority, required evidence, and completion criteria before acting; do not infer an approval that is not recorded.

4. From Port, open the battle-type selector beside the BATTLE! control and locate Training. The current wiki describes this selection path; exact labels or location may vary by client build.
5. Use the client's room-creation action. Set the map, battle mode, duration, available ship/tier/nation limits, room visibility/password if provided, and any approved description. Do not guess missing controls; record an item as not available and escalate if it is required by the fixture.
6. Assign participants to the published sides and use the selected format's visibility rule. Confirm team slots, observers and team leaders if used. Do not add bots or observers unless this event allows them.
7. Capture a host-side room/settings image or record where the approved procedure requires it; do not post passwords or private room credentials publicly.

4. Two-side verification and ready-up

⚓ **Quick hint:** Verify room configuration and both sides' readiness before starting; record exceptions as they occur.

8. Read the fixture aloud or post the game ID so everyone is checking the same match.
9. Both team representatives independently verify map, mode, duration, sides/spawns, legal lineup, visibility, player slots and observer permissions.
10. Resolve any objection before ready-up. If the installed client cannot represent an approved setting, do not silently approximate it; pause and contact the referee.
11. Record both representatives' confirmation and the actual start time. Start only when the room matches the approved settings and both sides are ready.

5. Clocks, restarts and faults

⚓ **Quick hint:** Apply the declared clock and restart rule for this event; record the trigger, time, and decision.

12. Use separate timestamps for scheduled start, attendance deadline, between-game deadline, restart request, restart approval and restart completion. Never use one clock to infer another.
13. Check the selected ruleset's restart quota and request cutoff. For the Pilot source baseline, requests are made within the first two minutes, completion window is five minutes, and each team has one ordinary restart. The recurring format's quota varies by series length and must be published.
14. Record reason, screenshot/replay evidence, requesting side, game clock, rule applied, quota impact, permitted lineup change, ruling official and final disposition.
15. If the cause may be an official/platform fault, preserve evidence and request a ruling. An extension is not automatic; it must be allowed by the published rule or recorded as an authorized emergency action.

6. Close the game

⚓ **Quick hint:** Reconcile official results and outstanding disputes before finalizing awards or closing records.

16. Confirm the match/game ID and result screen are consistent with the official fixture.

17. Ensure each participant submits required original evidence and that replay capture/retention matches the event policy. The recurring source baseline is to preserve replays for at least 48 hours, subject to the approved retention setting.
18. Record incidents, accepted metric corrections, disputes, the scoring calculation, and the final verified match outcome. Link the outcome to its participant-level inputs and outputs; record awards as separate decisions.
19. For recurring bracket play, advance from the verified match outcome calculated from the published individual-performance metrics and approved scoring method, applying the D21 tie-break hierarchy where needed; do not use a raw participant dblns value alone.

7. Current-client acceptance record

⚓ **Quick hint:** Check the stated authority, required evidence, and completion criteria before acting; do not infer an approval that is not recorded.

Test	Evidence to record	Status
Open Training from battle selector	Client version/build, date, exact UI path, screenshot.	NOT RUN in target client
Create room / choose settings	Screen capture for map/mode/duration/limits/access.	NOT RUN
Assign sides and visibility	Pilot visible and recurring hidden lineup cases as applicable.	NOT RUN
Host fallback	Rehearse host-unavailable case and record fallback.	NOT RUN
Restart and replay	Run test fault, restart cutoff/quota, replay creation and retrieval.	NOT RUN
Two-side confirmation	Record both representatives' confirmation method.	NOT RUN

8. Definition of done

⚓ **Quick hint:** Use the defined term consistently; if two documents differ, follow the explicitly named governing source.

Guide ready for publication when — A named host completes every applicable test in the installed game client, records screenshots/build/date, the referee validates the timings/exception flow, and the approved event settings use the same names and values. Until this record is completed, the procedure is a draft and RG21 remains open.

Reference

⚓ **Quick hint:** Historical material provides context only; do not present it as current validation or approval.

World of Warships Wiki, "Ship:Game Modes," Training section (accessed 29 October 2026): https://wiki.worldofwarships.com/Ship:Game_Modes. The wiki describes Training as unlocked at Access Level 17,

with up to 12 players per team, custom scenarios and configurable duration/team setup. This is supporting context, not proof of a current UI walkthrough.
