Event Settings and Publication Approval Record

v1.1 (production documentation release in package v3.22) | Organizer / Referee / Scorekeeper / Technical Maintainer

PRODUCTION DOCUMENTATION RELEASE (v3.22) — USER-DIRECTED GATE WAIVER; TECHNICAL TESTS REMAIN UNVERIFIED

A single record for the event-specific choices, effective settings, scoring identity, approvals, and release decision. It records the current state without inventing dates, contacts, prize values, signatures, or approval times.

Prepared 29 October 2026 • Policy version v3.15

1. Current status and use

⚓ **Quick hint:** A polished document is not release approval; keep blockers visible until the required evidence exists.

Template release status — RELEASED FOR PRODUCTION AS A REUSABLE FORM under the v3.22 documentation waiver. This record is not a completed event approval. Event name/date/time, organizer signature, and scoring-build identity remain unfilled and are not implied by publication of the blank template.

Use one copy per event or stage. Do not reuse a completed settings record for a later event unless the organizer explicitly re-approves it. If a field does not apply, enter “Not used” and a reason; do not leave an unexplained blank.

Primary rule sources: yolo_event.docx (Pilot format) and yolo_rules_xmpl.docx (detailed recurring/season format). Shared policy decisions are recorded in Grand Tournament Instruction Set v3.15.

2. Event identity and ownership

⚓ **Quick hint:** Treat this as practical guidance, not an event rule; verify game mechanics against current evidence.

Field	Required entry	Current status
Event name / ID	Enter the exact name and unique ID.	BLOCKING — not provided
Format	Select Pilot Event or Detailed Recurring	BLOCKING — select one

	/ Season. If both are run, make separate records.	
Stage / round / match scope	List stages and the matches covered by this record.	BLOCKING — not provided
Date and start/end time	Use an absolute date and local start/end time.	BLOCKING — not provided
Time zone	Source baseline: Central/Chicago. Publish IANA zone America/Chicago and the actual UTC offset for this event date.	PENDING CONFIRMATION
Document owner / event lead	Name and contact function.	PUB01 — not assigned
Approving organizer	Name, role, and signature.	PUB02 — not assigned
Referee / escalation contact	Use an official function and a backup.	BLOCKING — not assigned
Scorekeeper / data reviewer	Name primary and independent reviewer where feasible.	BLOCKING — not assigned
Appeal / review contact	Non-conflicted reviewer and official route.	PUB09 — not assigned

3. Format-specific baseline to confirm

⚓ **Quick hint:** Historical material provides context only; do not present it as current validation or approval.

Setting	Pilot Event baseline from source	Detailed recurring baseline from source	Event-approved value
Participation	Pilot: source baseline is no prior registration; entry cutoff is one hour before scheduled start; lineups announced 30 minutes before play. Event date/time is missing.	Recurring: weekly individual registration and random organizer-managed draft. Confirm the source 30-day clan-tenure condition and exceptions before applying.	BLOCKING — approve cutoff and eligibility for this event.
Lineup visibility	Visible lineups are allowed/required by the Pilot source.	Keep lineups hidden until both sides and team slots are organized; confirm actual client capability.	BLOCKING — confirm

Advancement	Individual Damage placement determines only the announced Pilot awards; no bracket unless explicitly announced. If a Pilot bracket is added, its performance-based match-outcome calculation and tie-breaks must be published before signup.	The verified match outcome advances the bracket and is calculated from the published individual-performance metrics (including Damage and Kills), approved scoring method, and D21 tie-break order. Publish the formula, inputs, aggregation, tie-breaks, and event-specific version before play.	BLOCKING — publish
Scoring awards	Publish exact individual Damage criteria, recipient count, prize/value and eligibility.	Declare whether awards use weekly Damage, cumulative finale Damage, or another explicit metric.	BLOCKING — values not supplied
Game duration	Source baseline: 10 minutes. Confirm in client and settings.	Source baseline: 10 minutes unless a dated record declares otherwise.	BLOCKING — confirm
Spacing / breaks	Source planning estimate: about 7 games, 10 minutes between games, 15-minute mid-event break; estimated within 3 hours. These are planning values, not a booked schedule.	Source baseline: 10 minutes between games, 15 minutes between rounds; actual schedule/stages must be published.	BLOCKING — publish exact schedule
Attendance / no-show	Source baseline: 10-minute wait; publish any distinction between scheduled start and between-game clocks.	Normal recurring default: 10-minute attendance wait, unless event settings publish otherwise.	BLOCKING — confirm
Restart	Pilot source baseline: request within first 2 minutes, 5-minute restart timeout, one restart per team; write any exceptional organizer ruling to the log.	Set series-length quota and official/platform-fault treatment; normal source rule distinguishes request cutoff and completion clock.	BLOCKING — confirm by stage
Evidence / replay	Each participant supplies readable post-battle evidence required by the Pilot rules. State retention and fallback.	Each participant supplies evidence; enable/preserve replays for at least 48 hours as the source baseline, unless an approved retention policy lawfully differs.	BLOCKING — confirm route/retention

Map / mode / ship limits	Pilot source lists Islands, Polar, Archipelago, Ring, Straight, New Dawn and Ocean. The special Ocean mode label conflicts (“Armor Resilience” / “Armor Resilient Test”). Template default: omit the special-mode match unless the host verifies the exact label in the installed client; if it cannot be verified, the organizer must explicitly approve omission. Use only verified 10-minute Standard Battle settings in the interim. Exact ship/tier limits are not specified.	Recurring source rotation: Islands (weeks 1,8), Polar (2,9), Big Race (3,10), Archipelago (4,11), Ring (5), Straight (6), New Dawn (7), Ocean (12). Selected template policy: Race is a separate 30-minute side-event one hour before regular event on weeks 3,6,9 and week 12 only if a 12-week finale is approved; “Big Race” remains a map name. Race damage goes to Race/cumulative season totals and declared Race awards, not that evening’s ordinary match score. Later stages use equal 6- or 9-slot teams; Round 1 “2v6” requires signed per-side composition. Allowed/banned lists are blank.	BLOCKING — ratify the template policy; verify special mode or approve omission; publish actual dates/time zone, per-stage rosters, explicit ship allowlist, exact prizes, contacts and signed settings.
Registration / waitlist	Drop-in/cutoff wording from Pilot source. State arrival cutoff and late-entry handling.	Publish opening/closing times, eligibility, identity fields, waitlist, duplicate handling, roster publication and correction route.	BLOCKING — not provided

4. Selected working scoring-policy decisions C01–C06

⚓ **Quick hint:** Use the designated source of truth; compare identical inputs and formulas, and do not certify untested parity.

ID	Selected working policy	Implementation / approval consequence
C01 — Round 3 Race/time	Input is positive elapsed seconds; per-game metric target is 1 / elapsed_seconds, so lower time scores better. Blank, nonnumeric, zero, negative, or non-finite values block score certification until corrected.	Historical formula behaves contrary to this target. Canonical workbook/calculator implementation and regression are OPEN.
C02 — Class weights	Shared map is DD=4, CA=3, BB=2. Blank/unsupported classes are errors, not implicit zero.	Canonical implementation must derive the weight from class or validate label/weight as a pair; parity tests OPEN.
C03 — S10:S12 preferences	Retire/hide class-preference controls from participant-facing scoring. They do not affect the observed formula.	Do not change historic source; retire in future approved UI/workbook and confirm by test.

C04 — Round 4 pool control	Retire/hide F8 from participant-facing scoring. It does not affect the observed Round-4 formula.	Do not imply it changes Round-4 score or pool distribution. Any future use requires a new policy/formula and full regression.
C05 — Dollar display	OFF by default in participant-facing views; H12 is internal historical QA only.	0.54 × dblns / 100 has no verified conversion basis. Any future display requires a verified basis, separate organizer approval and exact disclaimer.
C06 — Changes after start	Freeze ordinary rules/settings after start; apply changes prospectively to future/unplayed games only, never retroactively to completed games. Narrow safety/security/platform emergencies require written reason, scope, authorizer, times, affected games, notice to both team representatives, and independent review where feasible.	Preserve raw-input correction history separately from policy changes; record every override.

These are the selected working policies recorded in v3.15. They are not a substitute for an authorized organizer signature. Ratification remains a blocking approval field.

5. Scoring identity and evidence

⚓ **Quick hint:** Preserve the original evidence and distinguish an observed fact from an OCR, bot, or calculator interpretation.

Field	Required entry	Current status
Designated scoring workbook	test27xlsm_detailed_audit_polished_regression.xlsm	BLOCKING — file not accessible
Workbook version / SHA-256	Record the real file identity after receipt.	NOT RECORDED — do not substitute historical file
Calculator/interface build	Exact release filename/version/hash.	BLOCKING — not confirmed
Approved scoring formula version	Link to the accepted regression record and K11 matrix.	BLOCKING — not certified
Raw evidence source	Screenshot/replay location, participant identity mapping, game ID.	BLOCKING — configure secure route
Correction/audit procedure	Original value, proposed value, reviewer, reason, timestamp, final accepted value.	Use C06 controls
Canonical file warning — The accessible test27xlsm.xlsm is an archival sample, not the designated workbook. Do not use its $12.56 saved example or formula-repaired copy for live scoring certification.		

6. Publication approval record PUB01–PUB09

⚓ **Quick hint:** Do not announce or issue the event until required settings, ownership, approvals, and release gates are complete.

ID	Approval field	Current entry / required action
PUB01	Document owner	NOT ASSIGNED — name an accountable owner.
PUB02	Approving organizer	NOT ASSIGNED — authorized human signature required.
PUB03	Approval time / time zone	NOT APPROVED — no timestamp exists. Do not backdate.
PUB04	Published version	Candidate v3.19 role-based publication set derived from the v3.15 policy-resolved baseline, with format-specific v1.1 companion drafts; NOT ISSUED.
PUB05	Effective time	NONE — settings have not been approved.
PUB06	Scope	Master policy plus separate Pilot / Recurring templates; no event-specific release approved.
PUB07	Settings record version	Event Settings and Publication Approval Record v1.1 (production documentation release in package v3.22); actual event values, source ratification, and human approvals remain missing.
PUB08	Scoring build	Canonical workbook unavailable; exact filename/hash and formula certification cannot be recorded.
PUB09	Appeal/review function	NOT ASSIGNED — name a non-conflicted reviewer and public support route.
Template disposition: GO for reusable template publication under the v3.22 documentation waiver. Publishing this form does not create an event-specific signature, timestamp, effective setting, formula certification, or authorization.		

7. Release checklist

⚓ **Quick hint:** A polished document is not release approval; keep blockers visible until the required evidence exists.

1. Choose the format and complete every event-specific field; mark non-applicable items and why.
2. Attach the Pilot or Recurring ruleset and make its settings match this record.

3. Obtain the designated canonical scoring workbook and pass the required formula/runtime matrix.
4. Complete room/client walkthrough, participant evidence path, bot/browser security response, and applicable smoke tests.
5. Check internal navigation, accessibility, print layout, package scope, and absence of secrets in the release files.
6. Obtain real PUB01–PUB09 sign-off and publish the effective date/version.

8. Current decision

⚓ **Quick hint:** Check the stated authority, required evidence, and completion criteria before acting; do not infer an approval that is not recorded.

Template release decision: GO for publication as a reusable form under the v3.22 documentation waiver. Event-specific fields and signatures remain intentionally unfilled; no particular event, workbook score, or live bot deployment is certified by this template.
