Pilot Event — Participant Rules and Procedures

v1.1 (production documentation release in package v3.22) | Pilot participants, team representatives, host, referee, scorekeeper

PRODUCTION DOCUMENTATION RELEASE (v3.22) — USER-DIRECTED GATE WAIVER; TECHNICAL TESTS REMAIN UNVERIFIED

Source-derived Pilot baseline — confirm in the signed Event Settings Record: no prior registration; entry closes one hour before start; lineup announced 30 minutes before play; Home Team in top bracket slot hosts and names the room “Team 1 vs Team 2”; full room baseline is six humans and six bots, with bot count mirroring missing human slots and high-intelligence bots. Source map pool is Islands, Polar, Archipelago, Ring, Straight, New Dawn and Ocean. The special Ocean mode name conflicts between source sections (“Armor Resilience” and “Armor Resilient Test”). Template default: omit this special-mode match unless the installed client confirms its exact label; if not verifiable, use only verified 10-minute Standard Battle settings and obtain explicit organizer approval to omit the special-mode game. Exact ship/tier limits and event-specific map/award/date values are not supplied.

A short format-specific rulebook based on yolo_event.docx. It keeps the drop-in Pilot separate from the recurring season format. All event-specific date, prize, map and contact settings must be approved before issue.

Prepared 29 October 2026 • Policy version v3.15

1. Scope and publication status

⚓ **Quick hint:** A polished document is not release approval; keep blockers visible until the required evidence exists.

Production template status — RELEASED. This is a reusable Pilot ruleset, not a pre-filled event notice. Enter and verify event date/time, map, participant cutoff, awards, contacts, evidence channel, and any event-specific decision before using it to announce a particular event.

This Pilot is intended to be simpler and attendance-based. Do not import recurring-season registration, hidden-lineup or bracket rules unless the Pilot settings explicitly adopt them.

2. Event notice — complete before signup or announcement

⚓ **Quick hint:** Do not announce or issue the event until required settings, ownership, approvals, and release gates are complete.

Field	Required published value
Event date/time/time zone	BLOCKING — enter an absolute date/time and confirmed zone.
Arrival/check-in cutoff	Source baseline: no prior registration; entry closes one hour before scheduled start. Publish the final cutoff and late-entry handling.
Map / mode / ship limits	Source map pool: Islands, Polar, Archipelago, Ring, Straight, New Dawn and Ocean. Table baseline is Standard Battle, 10 minutes; Ocean is also listed as “Armor Resilient Test,” 5 minutes, while the narrative says “Armor Resilience.” Template default: do not schedule the special-mode match unless the installed client confirms the exact label; if it cannot be verified, use only verified 10-minute Standard Battle settings and obtain explicit organizer approval to omit the special-mode game. Source says maps are 30×30–36×36 and intended for low tiers but gives no exact ship/tier limit. Final map rotation/fixture must be approved.
Room host / fallback host	BLOCKING — name the primary and backup.
Lineup announcement time	Source baseline: announce the formed lineup 30 minutes before play; retain unless the organizer approves a dated change.
Award eligibility and value	Source baseline: individual total Damage determines placement, not team W/L. The source mentions a Doubloon prize for highest total but gives no amount; publish recipient count, eligibility and exact value before game one.
Evidence submission route	BLOCKING — publish the official channel/form and manual fallback.
Support / dispute contact	BLOCKING — name a referee or official route.
Approved settings version	BLOCKING — refer to the signed Event Settings Record.

3. Participation and team formation

⚓ **Quick hint:** Confirm eligibility, identity, and roster against the selected format before match setup.

1. This Pilot uses drop-in attendance unless the published settings explicitly state a registration variant. Do not assume that attendance guarantees a prize or a team slot after the cutoff.
2. The organizer forms teams from attendees and announces the final lineup before play. Resolve identity mismatches before the match.
3. A participant plays for one team in this Pilot. Any lineup substitution after lock requires the referee’s documented approval; it must not be used to evade eligibility or alter a result.

4. Keep this Pilot's exceptions separate from recurring-season rules. A Pilot Damage rank does not seed a later bracket unless that later event's published settings expressly say so.

4. Match timing and room checks

⚓ **Quick hint:** Apply the declared clock and restart rule for this event; record the trigger, time, and decision.

5. Use a 10-minute battle duration as the Pilot source baseline only after the host confirms it in the client and settings.
6. Planning estimate from the source: about seven games, 10 minutes between games, and a 15-minute mid-event break; estimated total time is within three hours. This is not an exact schedule. Publish actual fixture times before play.
7. Before ready-up, both representatives confirm mode, map, duration, sides/spawns, legal lineup, visibility and observers against the settings record. Do not start if the room contradicts the fixture.
8. The host's setup check does not replace the opponent's check. Record any approved deviation before starting.

5. Attendance, restarts, and rule changes

⚓ **Quick hint:** Apply the declared clock and restart rule for this event; record the trigger, time, and decision.

9. Pilot source baseline: allow 10 minutes from scheduled start for attendance. State the start point clearly and keep it separate from between-game waiting time.
10. Pilot source baseline: a restart request must be made within the first two minutes; once granted, the restart completion window is five minutes; each team has one ordinary restart. The event settings must state how verified official/platform faults are treated.
11. No competitive lineup/loadout change is allowed during a restart, except a documented replacement/reposition needed to recover a connection when the approved rule permits it.
12. Log the game ID, game clock, requester, fault, screenshot/replay, ruling, quota treatment, changes permitted, and timestamps. If a setting is ambiguous, pause and escalate.
13. Under C06, ordinary rules/settings freeze once play starts. Apply a change only to future/unplayed games; never retroactively change completed games. Emergency safety/security/platform overrides require a written reason, scope, authorizer, times, notice to both representatives, and independent review where feasible.

6. Evidence and individual awards

⚓ **Quick hint:** Reconcile official results and outstanding disputes before finalizing awards or closing records.

14. Every participant captures a readable original post-battle Personal Score/result screen for each game required by the approved event rules. Preserve the image unedited.
15. The scorekeeper maps evidence to the correct in-game identity, game ID, round, and event. If OCR is used, OCR is a proposed extraction—not an official value until checked against the image.
16. The Pilot's ordinary award model is individual Damage placement only to the extent the event notice states. Publish prize eligibility, exact values, and distribution before play. Do not invent a bracket.
17. A value that is missing, cropped, ambiguous, or inconsistent stays provisional. Request clearer evidence and retain the original plus any corrected accepted value and reviewer.

7. Participant close-out checklist

⚓ **Quick hint:** Complete the record at the point of action so the next operator can verify what was decided and why.

- I know the event time zone, arrival cutoff, map/mode and settings version.
- My in-game identity matches the published roster/alias mapping.
- I submitted the original readable result evidence for the required games.
- I reported disputes or technical faults before the published cutoff.
- I understand Damage placement determines only the individual awards expressly announced for this Pilot.

8. Definition of done

⚓ **Quick hint:** Use the defined term consistently; if two documents differ, follow the explicitly named governing source.

Pilot ready only when — The signed Event Settings Record is complete; actual event time/map/award/contact values are published; lineup/room checks have been rehearsed; evidence and manual fallback routes work; and a named organizer approves this exact version. Until then, this is a reusable draft.

Sources and authority

⚓ **Quick hint:** Historical material provides context only; do not present it as current validation or approval.

Primary Pilot source: yolo_event.docx. Shared procedures and decision precedence: the v3.15 policy-resolved source baseline for historical policy provenance; use the v3.19 Event Operations Manual for organizer workflow and gates, and the v3.19 Technical Reference for scoring definitions and implementation checks. The source contains planning values; this draft does not treat those planning figures as an event schedule or prize promise.
