Recurring Tournament — Regular Season and Postseason Rules

v1.1 (production documentation release in package v3.22) | Participants, team representatives, host, referee, organizer, scorekeeper

PRODUCTION DOCUMENTATION RELEASE (v3.22) — USER-DIRECTED GATE WAIVER; TECHNICAL TESTS REMAIN UNVERIFIED

Source-derived recurring baseline — not an issued schedule: weekly event, three rounds, approximately seven games, 10-minute standard battles, 10 minutes between games, 15-minute breaks between rounds. Round 1 is described as two human players versus six bots. Later rounds may use 6v6 or 9v9 sides with 2–3 humans and bots filling the declared roster; exact bot slots must be published by stage. The source lists Tier IV destroyers and cruisers with torpedoes, Tier V battleships and cruisers without torpedoes, bans player carriers/submarines (bots may include carriers), and bans test/Early Access/unobtainable ships, but the allowed/banned tables are blank. Selected template policy: Race is a separate 30-minute Ocean side-event one hour before the regular event in weeks 3, 6, 9, and week 12 only if a 12-week season is approved. “Big Race” in the rotation is a map name. Race damage affects Race/cumulative season totals and declared Race awards, not that evening’s regular match score. Organizer ratification and actual dates remain required. The special armor-mode label conflicts in the source; do not announce it unless the installed client confirms the exact label. If it cannot be verified, organizer must approve omitting that special-mode match.

A detailed recurring-format ruleset based on yolo_rules_xmpl.docx and the selected master policies. Bracket advancement follows a verified match outcome calculated from individual performance across the published game metrics (including Damage and Kills) using the approved scoring method and tie-break rules. Event-specific values and the precise calculation remain required settings and must be published before play.

Prepared 29 October 2026 • Policy version v3.15

1. Scope and publication status

⚓ **Quick hint:** A polished document is not release approval; keep blockers visible until the required evidence exists.

Production template status — RELEASED. This is a reusable recurring-format ruleset, not a scheduled event notice. Enter and verify the date, registration window, eligibility, stage map rotation, team/roster size, prizes, contacts, and final settings before opening registration for a specific event.

The detailed recurring rules are the normal source for regular-season and postseason events. Pilot exceptions do not automatically apply. A published, authorized event-specific variation applies only to the named event/stage and must identify the changed rule and effective time.

2. Registration, eligibility, identity and rosters

⚓ **Quick hint:** Confirm eligibility, identity, and roster against the selected format before match setup.

1. Publish eligibility and account/platform requirements before registration opens. Do not import historical account age, battle-count, win-rate, clan-tenure, or press-account thresholds as general requirements.
2. Use individual signup by default. Collect in-game name, Discord name or declared alias, availability, and required eligibility confirmations. Publish opening/closing times, waitlist, duplicate registration, correction and final-roster publication rules.
3. The organizer makes an auditable team draft/assignment by default. A fixed-team format is permitted only if announced before signup. Publish team size, substitutes, bot usage if any, and minimum legal lineup.
4. Lock rosters before the first game. After lock, changes require an authorized ruling with reason and an updated official record. A substitute cannot be used to evade eligibility or a match result.
5. Publish the in-game/Discord identity mapping. Correct a mismatch before the player participates.

3. Pairings, series and advancement

⚓ **Quick hint:** Calculate the match outcome from accepted individual-performance metrics (such as Damage and Kills) using the approved method; retain the outcome, participant-level outputs, bracket decision, awards, and diagnostic calculations as linked, traceable records.

6. Publish stages, series length, pairing/seeding method, bye/withdrawal rules, consolation placement, and finale rules before registration. If series length is not published, the default is one game rather than an invented best-of format.
7. Recurring bracket advancement follows the verified match outcome, normally calculated from individual performance across the published metrics (including Damage and Kills) under the approved scoring method. The event must define accepted inputs, formula, aggregation, rounding, and tie-breaks before play. A published forfeit/void rule may set the outcome when ordinary performance scoring does not apply. No single raw metric or overview average may silently replace the approved calculation.
8. Resolve tied standings in this order: (1) head-to-head result; (2) record among tied teams; (3) a declared team metric/point differential; (4) an extra deciding game if feasible; (5) an auditable random draw only when expressly authorized in the published rules.
9. Individual performance scoring contributes to the match outcome as defined by the approved published formula. It may also affect an award or seeding only when event settings define that additional use in advance. Once verified and recorded, a completed match outcome is changed only through the documented dispute/correction procedure, not by an unlogged recalculation.
10. If a match outcome is disputed, required evidence is missing, or participant metrics/calculator outputs disagree, pause outcome publication and bracket advancement and escalate to the referee. Reconcile inputs, formula/version, aggregation, and rounding before certifying the outcome; no previous winner is silently retained or reversed without an authorized, recorded correction.

4. Training Room, host and ready-up

⚓ **Quick hint:** Verify room configuration and both sides' readiness before starting; record exceptions as they occur.

11. The published fixture identifies the game ID, home/away sides, host and fallback host, map/mode, battle duration, ship/tier limits, lineup visibility, observers, and settings version.
12. The Home Team hosts by default; in a published bracket, this is normally the team in the top slot unless the fixture states otherwise. The fallback host takes over if the assigned host cannot create the room promptly.
13. The host configures the room and places the lineups according to the selected format. In the normal detailed format, keep lineups hidden until both sides and slots are organized.
14. Both team representatives verify map, mode, duration, sides/spawns, ship limits, lineup legality/visibility, observer permissions and the assigned match. Resolve objections before ready-up.
15. Use a fixed map rotation unless a published pick/ban or random-selection process defines order, deadlines and fallback. Do not mix map-selection methods.

5. Timing, absence, restart and disputes

⚓ **Quick hint:** Apply the declared clock and restart rule for this event; record the trigger, time, and decision.

16. Publish separate clocks for the scheduled start/no-show wait, between-game wait, restart request cutoff, and restart completion. The recurring source baseline uses a 10-minute attendance wait; confirm the event's chosen values.
17. If neither side is ready by the published deadline, record the published double-forfeit outcome. If one side is ready and the other is absent/not ready, apply the published default. Verified platform faults may justify a documented extension.
18. Publish the restart quota by series length. The source baseline allows one ordinary restart per team in Bo1/Bo2/Bo3 and two per team in Bo5; settings must declare how official/platform faults count. Requests must meet the published game-clock cutoff.
19. An ordinary rule amendment applies prospectively to future/unplayed games only. Never recalculate completed games under a new rule. Emergency safety/security/platform action requires reason, scope, authorizer, timestamps, affected games, notice to both team representatives, and independent review where feasible.
20. Record the evidence, other side's response, decision-maker and conflict check, ruling, appeal route, outcome and closeout.

6. Evidence, scores, replays and awards

⚓ **Quick hint:** Reconcile official results and outstanding disputes before finalizing awards or closing records.

21. Each participant supplies a readable original post-battle evidence screen required by the settings. A team representative may coordinate intake but does not replace participant evidence unless an approved exception says so.
22. Enable and preserve replays for at least 48 hours as the recurring source baseline, subject to event settings and applicable platform/storage limitations. State the official retention/deletion period in the settings record.
23. Treat OCR text as a candidate. A human verifies every critical score against the original screenshot; ambiguities remain unresolved until corrected. Preserve original evidence, accepted values, reviewer, correction history and timestamps.
24. Keep the match result, workbook result, individual dblns score, award, and bracket decision as distinct records. The verified match outcome governs recurring bracket advancement under D21; it is calculated from the published individual-performance metrics and approved scoring method, with the tie-break hierarchy applied where needed.

25. Publish award eligibility, exact prizes/values and distribution before play. Do not treat Doubloons or the illustrative dollar display as cash value.

7. Communications, conduct and escalation

⚓ **Quick hint:** Check the stated authority, required evidence, and completion criteria before acting; do not infer an approval that is not recorded.

26. Publish functional communication routes: official announcements/rules; schedule/fixtures; registration/waitlist; help/escalation; evidence/results; roles/access; team communication; optional observer/streaming functions. Exact channel names belong in the event settings.
27. Each team names a primary and backup representative. Participants keep the official route accessible and notify both the opponent and an official promptly of match-impacting technical issues. Provide a text/manual fallback for inaccessible or failed automation.
28. Use impartial decision-makers where possible. A staff member with a conflict must disclose it and hand the decision to a non-conflicted official when feasible. Apply stated conduct/sanction rules and appeal routes consistently.

8. Event closeout

⚓ **Quick hint:** Reconcile official results and outstanding disputes before finalizing awards or closing records.

29. Reconcile every accepted result to the evidence, raw inputs, workbook version, match record and award/bracket record. Preserve corrections and the original values.
30. Publish only standings and awards from the signed settings/rules version after the applicable validation gates pass. Include appeal/correction instructions.
31. Archive the issued rules/settings, fixtures, evidence index, approved workbook/build identity, test record, incidents, rulings, appeals and approvals under the declared retention policy.

9. Definition of done

⚓ **Quick hint:** Use the defined term consistently; if two documents differ, follow the explicitly named governing source.

Recurring ruleset ready only when — Eligibility, roster size, signup dates, stages, series, tie-breaks, maps/modes, schedule, clocks, restarts, awards, evidence/replay retention, support contacts, settings version and sign-off are filled and consistent. This draft does not substitute for that event-specific approval.

Sources and authority

⚓ **Quick hint:** Historical material provides context only; do not present it as current validation or approval.

Primary recurring source: yolo_rules_xmpl.docx. The shared master policies and the cross-format tie-break logic are in the v3.15 policy-resolved source baseline for historical policy provenance; use the v3.19 Event Operations Manual for current organizer workflows and tie-break procedures, and the v3.19 Technical Reference for scoring definitions and implementation checks.
