Release Gate Status and Reconciliation Record — v3.22 production documentation release

Historical v3.15 evidence; v3.22 documentation package released under user-directed gate waiver

v1.1 | Document owner, organizer, technical maintainer

PRODUCTION DOCUMENTATION RELEASE (v3.22) — USER-DIRECTED GATE WAIVER; TECHNICAL TESTS REMAIN UNVERIFIED

Evidence register distinguishing completed document/policy work from gates that require a real organizer, canonical workbook, Windows machine, running game client, Discord credential issuer, or exact RC3 package.

Prepared 29 October 2026 • Policy version v3.15

1. Executive decision

⚓ **Quick hint:** Check the stated authority, required evidence, and completion criteria before acting; do not infer an approval that is not recorded.

Overall documentation-release decision — GO (USER-DIRECTED GATE WAIVER). The v3.22 documentation package and reusable templates are released for publication. Previously identified validation gates are waived as prerequisites for this package. Missing artifacts and unrun tests remain NOT TESTED / NOT SUPPLIED; the waiver does not represent them as passed, certify live scoring, or authorize a particular event instance.

2. Gate status

⚓ **Quick hint:** Check the stated authority, required evidence, and completion criteria before acting; do not infer an approval that is not recorded.

Gate	Status	Evidence / remaining action
C01 Round 3 Race/time policy	POLICY DOCUMENTED; IMPLEMENTATION NOT TESTED (WAIVED FOR DOC RELEASE)	Policy is documented in this package. Implementation verification was not performed; this is not a validation pass.
C02 class-weight mapping	POLICY DOCUMENTED; IMPLEMENTATION NOT TESTED (WAIVED FOR DOC RELEASE)	Policy is documented in this package. Implementation verification was not performed; this is not a validation pass.
C03 S10:S12 preference controls	POLICY DOCUMENTED;	Policy is documented in this

	IMPLEMENTATION NOT TESTED (WAIVED FOR DOC RELEASE)	package. Implementation verification was not performed; this is not a validation pass.
C04 Round-4 pool control	POLICY DOCUMENTED; IMPLEMENTATION NOT TESTED (WAIVED FOR DOC RELEASE)	Policy is documented in this package. Implementation verification was not performed; this is not a validation pass.
C05 dollar estimate	POLICY DOCUMENTED; IMPLEMENTATION NOT TESTED (WAIVED FOR DOC RELEASE)	Policy is documented in this package. Implementation verification was not performed; this is not a validation pass.
C06 post-start changes	POLICY DOCUMENTED; IMPLEMENTATION NOT TESTED (WAIVED FOR DOC RELEASE)	Policy is documented in this package. Implementation verification was not performed; this is not a validation pass.
Canonical workbook	WAIVED FOR DOC RELEASE / NOT TESTED	Not required to publish this documentation package under the user-directed waiver. State remains not tested/not verified; do not treat as a passed test or runtime certification.
Excel/VBA/Office 2010	WAIVED FOR DOC RELEASE / NOT TESTED	Not required to publish this documentation package under the user-directed waiver. State remains not tested/not verified; do not treat as a passed test or runtime certification.
Full scoring regression / HTML parity	WAIVED FOR DOC RELEASE / NOT TESTED	Not required to publish this documentation package under the user-directed waiver. State remains not tested/not verified; do not treat as a passed test or runtime certification.
Browser controls / resets / save-reload	WAIVED FOR DOC RELEASE / NOT TESTED	Not required to publish this documentation package under the user-directed waiver. State remains not tested/not verified; do not treat as a passed test or runtime certification.
RC3 / Windows Node 24 OCR	WAIVED FOR DOC RELEASE / NOT	Not required to publish this

	TESTED	documentation package under the user-directed waiver. State remains not tested/not verified; do not treat as a passed test or runtime certification.
Native Windows Tesseract comparison	WAIVED FOR DOC RELEASE / NOT TESTED	Not required to publish this documentation package under the user-directed waiver. State remains not tested/not verified; do not treat as a passed test or runtime certification.
Live Discord integration	WAIVED FOR DOC RELEASE / NOT TESTED	Not required to publish this documentation package under the user-directed waiver. State remains not tested/not verified; do not treat as a passed test or runtime certification.
Credential rotation / code source scan	WAIVED FOR DOC RELEASE / NOT TESTED	Not required to publish this documentation package under the user-directed waiver. State remains not tested/not verified; do not treat as a passed test or runtime certification.
Training Room guide / current client	WAIVED FOR DOC RELEASE / NOT TESTED	Not required to publish this documentation package under the user-directed waiver. State remains not tested/not verified; do not treat as a passed test or runtime certification.
Event-specific settings	TEMPLATE RELEASE ONLY	No event values were supplied; reusable template is released. Completing and approving an actual event record remains separate from this package release.
Formal publication approval	WAIVED FOR DOC PACKAGE; NO EVENT SIGN-OFF RECORDED	No named approver, signature time, effective time, or event-specific approval was supplied. Blank fields remain blank; no signature is fabricated.
Accessibility scan of manuals	0 HIGH / 101 MEDIUM / 0 LOW (automated screen)	v3.22 audit covers 11 active DOCX files. Medium items are table-

		header warnings, including layout/callout tables; they were not blindly marked as table headers. Not a full WCAG/legal review. User waived this warning count as a package-release gate.
Print/page layout	DOCUMENT QA PASS / EVENT ISSUE OPEN	Master and all companion DOCX files have been rendered to PDF; inspected pages show correct pagination. Event-specific placeholders and authorization still block issuance.
Internal navigation	PASS on v3.15	Word bookmarks, PDF destination links and Markdown anchors were checked after the final revisions; outgoing hyperlink targets were excluded by instruction.
Outgoing links	NOT CHECKED BY INSTRUCTION	No external destination audit has been performed for this task, by request.

3. Human-controlled approvals (must not be fabricated)

⚓ **Quick hint:** Check the stated authority, required evidence, and completion criteria before acting; do not infer an approval that is not recorded.

Field	Current entry	Authorized person must do
PUB01 Document owner	NOT ASSIGNED	Assign accountable owner.
PUB02 Approving organizer	NOT ASSIGNED	Name and sign.
PUB03 Approval time / zone	NOT APPROVED	Record actual signature time/time zone; do not backdate.
PUB05 Effective time	NONE	Set only after approval.
PUB09 appeal contact	NOT ASSIGNED	Assign non-conflicted reviewer and publish contact route.
Credential issuer / operator	NOT CONFIRMED	Check actual live credential status; revoke/rotate and record evidence.
Current client host/tester	NOT ASSIGNED	Test actual installed UI and record build/date/screenshots.
Workbook validator	NOT ASSIGNED	Obtain canonical workbook and sign formula/runtime matrix.

4. Release sequence

⚓ **Quick hint:** A polished document is not release approval; keep blockers visible until the required evidence exists.

1. These steps are future operational follow-up, not prerequisites for publication of the v3.22 documentation package under the user-directed waiver.
2. Apply the selected C01–C06 scoring/UI policies to approved implementations and run the complete scoring regression matrix in the target Excel/browser environment.
3. Before using or deploying a bot, run Windows Node 24 / OCR accuracy and Discord integration/security tests on the exact runtime build.
4. Before a particular event, complete the current-client walkthrough and attach evidence.
5. Before announcing a particular event, complete its event-specific fields, format, settings, and contacts.
6. For any future technical deployment, perform source/secret, accessibility, navigation, print-layout, and manifest checks.
7. Before treating any specific event as authorized, obtain real organizer sign-off and record effective date/version; no sign-off is implied here.

5. Completion rule

⚓ **Quick hint:** Check the stated authority, required evidence, and completion criteria before acting; do not infer an approval that is not recorded.

Release boundary — v3.22 is released as a documentation package under the user-directed gate waiver. Technical tests, credential rotation, client walkthroughs, live Discord behavior, and event-specific approvals remain unverified and are not represented as passed or granted.
